WATER HEATING

Standard Heaters

Each water heater shall have a minimum tank capacity of 40 gallons. Water heaters shall be equipped with a pressure-temperature relief valve located in the top of the tank and an over-temperature cutoff switch or shall comply with applicable governmental regulations. The lower and upper heating elements shall not exceed 20 watts and 30 watts per gallon of tank capacity respectively or 5,500 watts each, whichever is greater. Heating elements shall be thermostatically controlled and shall be interlocked to prevent simultaneous operation of the lower and upper elements. The water heater, wiring and piping shall also conform to Company standards in all other respects.

**SCHEDULE 22—(Concluded)**

High Capacity Heaters

When Customer uses electric energy as the only means of space heating, water heating service will be supplied at the heating rate for total element capacity not exceeding 150 watts per gallon of tank capacity. Elements shall be arranged for operation in successive steps.

When Customer uses electric energy as the only means of space heating, water heating for swimming pools will be supplied at the heating rate when installations conform to Company standards.

GENERAL

Compensating for Transmission and Distribution Losses.

For service at less than 1,000 volts, multiplying Customers' on peak metered energy by 1.09333 and off-peak metered energy by 1.04808 produces the generation energy that must be delivered to the West Penn system. For service between 1,000 and 15,000 volts, the multipliers are 1.07447 and 1.04325 respectively. (C)

The kilowatt-hours of connections at an establishment being combined for billing purposes as of July 7, 1976 may continue to be combined. All other connections shall be billed separately.

A single family residence located within an establishment used also for other purposes may be separated electrically and billed as a separate connection under the appropriate residential rate schedule if Customer so desires.

TERM One month or longer.
